DETAILED ACTION

Withdrawn Rejections

1. The 35 USC 112 rejection of claims 20-25 of record in Paper #4, Page 4, Paragraph #3 has been withdrawn due to the Applicant's amendment in Paper #5.
2. The 35 USC 102 rejection of claims 16-18 as anticipated by Levine of record in Paper #4, Pages 4 and 5, Paragraph #5 has been withdrawn due to the Applicant's amendment in Paper #5.
3. The 35 USC 103 rejection of claims 19 -25 of record in Paper #4, Pages 5 and 6, Paragraph 7 has been withdrawn due to the Applicant's amendment in Paper #5.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
5. **Claims 16-25** are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitations "having a width and a thickness defining first and second sides and a pair of edge regions" and "having substantially consistent thickness at the first and second sides and at the edge regions" in **claim 16** are deemed vague and indefinite. Clarification is requested.

The recitation “has a greater thickness at about the edge regions and on the first and second sides adjacent the edge regions defining a dog-bone profile” in claim 17 is deemed vague and indefinite. How much is greater? Clarification is requested.

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. **Claims 16 and 19-25** are rejected under 35 U.S.C. 102(b) as being anticipated by Winkle, Sr. et al. (5,176,755).

Winkle, Sr. et al. discloses a corrosion-resistant coated and cured strap comprising an elongated metal strap base element, the metal strap base element having a width and a thickness (see col. 7, lines 52-55 and see col. 9 and 10, Table 3) defining first and second sides and a pair of edge regions; and a melted and cured powder coating on the base element (see col. 2, lines 9-17); the coating having substantially consistent thickness at the first and second sides and at the edge regions (see col. 2, lines 40-43). Regarding **claim 19**, the powder is an epoxy material (see col. 5, lines 46-48). Regarding **claims 20-25**, note the coating has a thickness as recited in claims 20-25 (see col. 5, lines 48-54).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1772

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. **Claim 17** is rejected under 35 U.S.C. 103(a) as being unpatentable over Winkle, Sr. et al. (5,176,755) in view of Levine (4,601,958).

Winkle, Sr. et al. discloses a corrosion-resistant coated and cured strap comprising an elongated metal strap base element, the metal strap base element having a width and a thickness (see col. 7, lines 52-55 and see col. 9 and 10, Table 3) defining first and second sides and a pair of edge regions; and a melted and cured powder coating on the base element (see col. 2, lines 9-17); the coating having substantially consistent thickness at the first and second sides and at the edge regions (see col. 2, lines 40-43). However, Winkle, Sr et al. fails to disclose the coating thickness defining a dog-bone profile. Levine teaches a dog-bone thickness profile (see col. 4, line 38) in the art for the purpose of minimizing corrosion to a metal strap.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have modified the coating thickness in Winkle, Sr. et al. to define a dog-bone profile as suggested by Levine in order to minimize corrosion to a metal strap.

Response to Arguments

10. Applicant's arguments filed in Paper #5 regarding the 35 USC 102 rejection of claims 16-18 as anticipated by Levine have been carefully considered but are moot due to the new grounds of rejection.

11. Applicant's arguments filed in Paper #5 regarding the 35 USC 103 rejection of claims 19-25 over Levine have been carefully considered but are moot due to the new grounds of rejection.
